125

N5.

Обозначим неизвестные металлы как Me_1 и Me_2

предположим, что Me_1 - двухвалентный, Me_2 - трёхвалентный

25-10 = 15

Вариант № 3

По условию $n(\text{Me}_1) = n(\text{Me}_2)$ Пусть $n(\text{Me}_1) = n(\text{Me}_2) = x$ моль
 $n(\text{H}_2) = 0,1$ моль $2,5x = 0,1$ $x = 0,04$ моль

Предположим, что с NaOH реагирует только Me_2

Пусть $n(\text{Me}_2) = y$ моль $n(\text{Me}_2) = 0,067$ моль

Получаем уравнение:

$$0,04 \cdot M(\text{Me}_1) + 0,04 \cdot M(\text{Me}_2) = 304$$

$$0,067(M(\text{Me}_1) + M(\text{Me}_2)) = 3,4$$

$$0,04(M(\text{Me}_1) + M(\text{Me}_2)) = 304$$

$$M(\text{Me}_1) + M(\text{Me}_2) = 51$$

$$M(\text{Me}_1) + M(\text{Me}_2) = 51$$

Проверим по массе, получаем $\text{Me}_1 = \text{Mg}$ $\text{Me}_2 = \text{Al}$

$m(\text{Mg}) = 0,962$
в смеси

$m(\text{Al}) = 1,082$
в смеси

$W(\text{Mg}) = 47,06\%$

$W(\text{Al}) = 52,94\%$

Ответ: Mg и Al, 47,06%; 52,94%.
